Data
Uses KEEL data
Uses UCI data
At least 18 real datasets (median)
Some data not public
States why the data were chosen
Learners and competitors
More than one base learner
Random forest or boosting learner
States why the learners were chosen
Includes a no-resampling baseline
Includes SMOTE as a competitor
Measures
Reports accuracy or error rate
Reports a threshold-free measure
Measure-definition problem
Measures resampled data directly
Protocol and tuning
Repeated partitions
States train-only resampling
Settings chosen on evaluation data
Statistical testing
Any significance test
Corrected or Bayesian procedure
Cites a testing methodology
Reporting
Reports standard deviations
Reports running time
Code released
Outcomes
States where proposal is not better
